## Softship Academy - Administrator Training

From November 2 - 6, 2009, the Softship Academy conducted a training series for advanced Softship application administrators. In the surroundings of Softship's training rooms the participants deepened their skills in managing the Softship Suites.

Senior consultant Christoph Hegemann and his

team conducted the training in closely coached hands-on training units.

The courses' topics ranged from basic skills like installation, fixes and backup to the advanced levels of creating a new company, crystal report creation and -integration into ALFA/LIMA, the B/L format generator, handling of printing in Citrix environments, database interna, managing the EDI Guard and advanced user security topics.

The training was held in a relaxed and productive atmosphere, giving plenty of room for individual questions and exchange of experience.

## Steady Progress with Softship.WEB

As the Internet grows more and more into an information and commercial tool of everyday life in business and private life, the demand for tightly secured customer platforms rises steadily.

Internet applications like Web B/L meet these demands. They enable your customers to enter and maintain their key shipping information like directly and severely controlled, annihilating the error-prone conventional procedure.

For some time now the Softship development has a focus on these services and will continue to roll out related web applications:

.WEB Quotes, .WEB Bookings, .WEB B/L and Documents, .WEB Track & Trace and more.

Softship.WEB - the future in customer web application access
