Softship Port Cost Calculator

Use the Softship Port Cost Calculator to process the documentation and data associated with each port call. Streamline and automate your port cost and voyage result calculations for greater speed and accuracy, but with less stress.

Today's challenge

Your vessels will call at many ports in many regions of the world and each port call requires large amounts of data and documentation to be processed. Expenses for a range of purchases and activities will need to be tracked, reconciled and authorised.

This can be a complex and time-consuming business with a high potential for errors and inaccuracies.

The Softship Port Cost Calculator manages the entire process. It speeds up and automates the activities, reduces errors and introduces full visibility across each port call.

The solution

Simply pre-load your vessel's port activities into the Softship Port Cost Calculator from your port call templates. Unforeseen incidents and regulatory changes can be captured directly from your vessel reports.

Based on these inputs, the calculator will present a pre-populated list of all expected charges and costs. Your total port call expenses are calculated quickly and easily. These expected costs are automatically applied to your voyage result calculation.

Regulative Measures

	Code	Description	Save Time Est (minutes)
1	ADDEGEAR	Mobile Crane	120.00

As you receive vendor invoices, these are automatically reconciled and approved for payment. This speeds up the process and eliminates errors. Any discrepancies are identified and can be resolved rapidly.

Using the Softship Port Cost Calculator to maintain up-to-the-minute and fully accurate records will give you full visibility of your expenses at all stages of each port call.

Integration

These web services facilitate a seamless exchange of data within your company and between your company and your business partners.

Benefits

- Simplify and speed up your port call related tasks
- Fully integrated cost calculation system
- Full visibility of expenses at any stage of a port call
- Seamless data flow to accounting system and other third-party systems
- Reduced errors through automatic invoice reconciliation
- Fast and accurate accounting of agent's disbursements
